

Human Ecology Section of the ESA

Human Ecology...

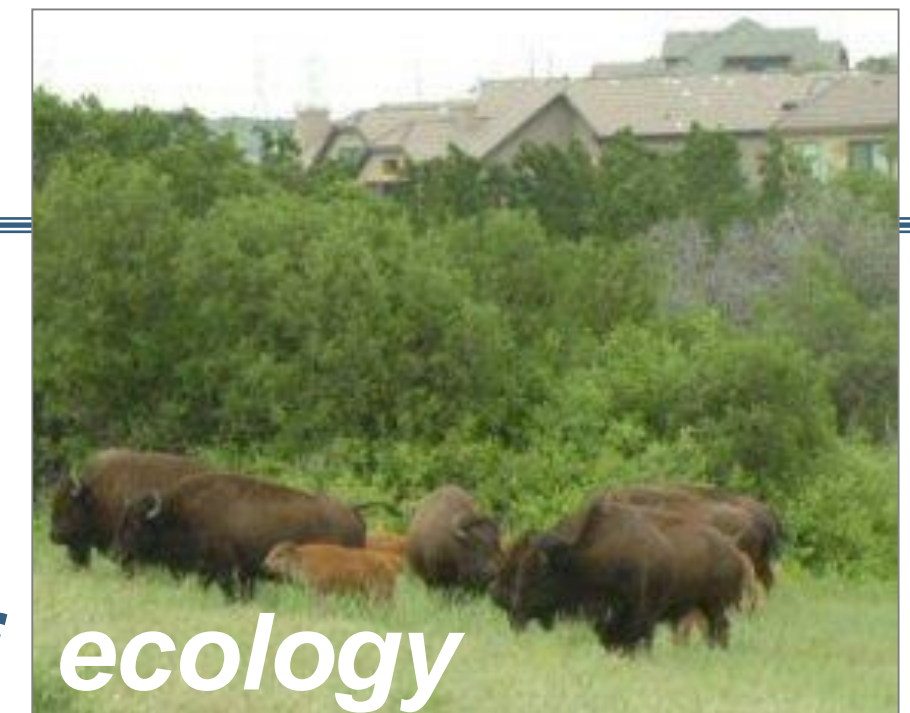

is an **interdisciplinary** science that explores the **interactions** of human and ecological systems. It is also an **applied** science that seeks to employ our understanding of human and ecological systems towards **sustainable** stewardship of the **biosphere**.

The Human Ecology Section was formed in **2008** to build a community of people who think about how nature and culture are linked.

For more information, visit societyforhumanecology.org/heesa

Join in with **Human Ecology** and help frame the future!

"The science of ecology cannot be advanced without improving our understanding of human-environment interactions."

—Human Ecology section website
